

ROUND 3

The world stands on the edge of chaos. War has broken out across five critical U.S. allied nations—France, the UK, Denmark, Brazil, and Spain. With their defences stretched thin, these nations have sent urgent requests for military support. The United States government, determined to honour its commitments, has secured a massive stockpile of Beer Cups from its defence reserves. You are tasked not with producing them, but with something far more challenging—transporting them across dangerous and unpredictable global routes. The success of this mission depends entirely on your decisions.

The U.S. has activated ten major ports scattered across its East Coast, West Coast, and Gulf Coast, prepared for immediate deployment. Each comes with its own risks and challenges. As war tightens its grip on the world, the logistics network is stretched to its limits. Some ports are threatened by natural disasters, while others face security breaches, infrastructure failures, or hostile activity. Every choice you make will impact the fate of thousands.

Storm warnings have been issued along the Atlantic coast, with hurricane winds threatening to disrupt shipping lanes. Meanwhile, increased naval patrols near key ports could cause sudden inspections, delaying crucial shipments. In the chaos of war, even the best-laid plans can unravel in seconds.

Time is your most precious resource, but cost cannot be ignored. The allied nations wait anxiously. France braces for an assault; the UK struggles to maintain its defences. Denmark prepares for conflict along its northern shores, while Brazil defends its coastline from hostile incursions. Spain, surrounded by mounting threats, calls for immediate reinforcements. Every hour counts, every delay has consequences, and every shipment delivered late risks plunging these nations deeper into crisis.

Your mission is clear: deliver the Beer Cups as fast as possible while managing transportation costs under wartime conditions. The U.S. government will be monitoring your performance, judging every decision. You must select ports strategically, navigating a labyrinth of shifting dangers while ensuring the fastest, most cost-effective deliveries. Your choices will determine whether these nations survive the storm or succumb to its fury.

The map lies before you. Ten ports, five destinations, and countless dangers stand between you and mission success. The orders have been issued, the Beer Cups are ready, and time is slipping through your fingers. In a world gripped by war, only the sharpest minds can master the chaos of conflict. Will you rise to the challenge when every second counts?
